

My client is seeking a professional to perform Fire Protection consulting services for internal and external clients. **This position is located in Hawaii.** Technical skills will include, but are not limited to: automatic suppression system design; fire detection, alarm and mass notification system design; code analysis; egress analysis; fire resistant construction analysis; smoke control analysis; as well as general fire protection and life safety concepts and research.

### **Requirements Include:**

- Bachelor's degree (B.S.) from accredited college or university
- Fire Protection License by examination issued by any state in the United States
- EIT, or P.E. (preferred)
- **Minimum of five years of experience in the fire protection profession**
- Passion for great client experiences and design
- Ability to work independently and also collaboratively with others
- Excellent verbal and written communication skills
- Motivation to learn the latest technologies and practices to enhance your professional growth

### **You Will Have:**

- Intermediate level computer skills necessary for daily activities, including email, word processing, spreadsheets, simple graphics, fire dynamic simulation, and a working knowledge of computer aided drafting
- Ability to perform analysis of existing fire protection systems, as well as design new fire protection systems including suppression systems, fire detection, alarm and mass notification systems.
- Ability to perform building and fire code analysis and interpretation
- Project management skills for managing internal projects as well as external client needs
